

ENVIRA H

Envira H from SMA Mineral is slaked lime that is manufactured at certain plants where we also have production of quicklime. The product is manufactured with quicklime as a raw material. Envira H is normally used in water treatment processes not linked to the production of drinking water.

For use in drinking water production, please refer to product sheet for Envira H-W.

Chemical composition (%)*

SUBSTANCE	ENVIRA H
CaO _{total}	73,2
CaO _{ASTM C-25}	72,5
Ca(OH) ₂ ASTM C-25	93,2
H ₂ O	0,6

*Guide value

Fractions

ENVIRA H is usually supplied in the form of a fine powder (0–75 microns).

Transport and packaging

Bulk transport by truck is the most common mode of transport. Where necessary, the lime can also be delivered in sacks.

Quality

To ensure that the quality meets the set requirements, we continually take samples and carry out tests at all units and at SMA Mineral's Central Laboratory.

Safety

It may be harmful to get slaked lime in the eyes or on the skin, please read our slaked lime safety data sheet found at smamineral.se.

Service

When choosing a product from the Envira family from SMA Mineral, you make a safe choice. You have a personal salesperson who you can turn to and who actively monitors that everything is working properly. In case of urgent questions or need for delivery, our transport managers are available 24 hours a day, every day, all year round.
